DETAILED ACTION

Response to Amendment

1. This action is in response to the communication dated May 9, 2005 with the amendment to claim 17, the cancellation of claims 1-16 and 18-21 and the addition of claims 22-26.
2. Claims 17 and 22-26 are pending.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 17 and 22-26 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2, 6, 8, 12, 16-19 of copending Application No. 09/919011. Although the conflicting claims are not identical, they are not patentably distinct from each other because they discuss about the same subject matter which generates a ROM image.

It would be obvious to one of ordinary skill in the art at the time of the invention to employ the use of aligning data image using a fill pattern and an alignment value prior to

validating the data image and looping through each data image to compute a size of each data image, to align each data image, if necessary, and to generate a validating signature for each data image in the system of Allison et al. as the copending application 09/919011 teaches so as to create an effective signature and checksum.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
